

Facilitating Net Zero

Local Area Energy Planning (LAEP)

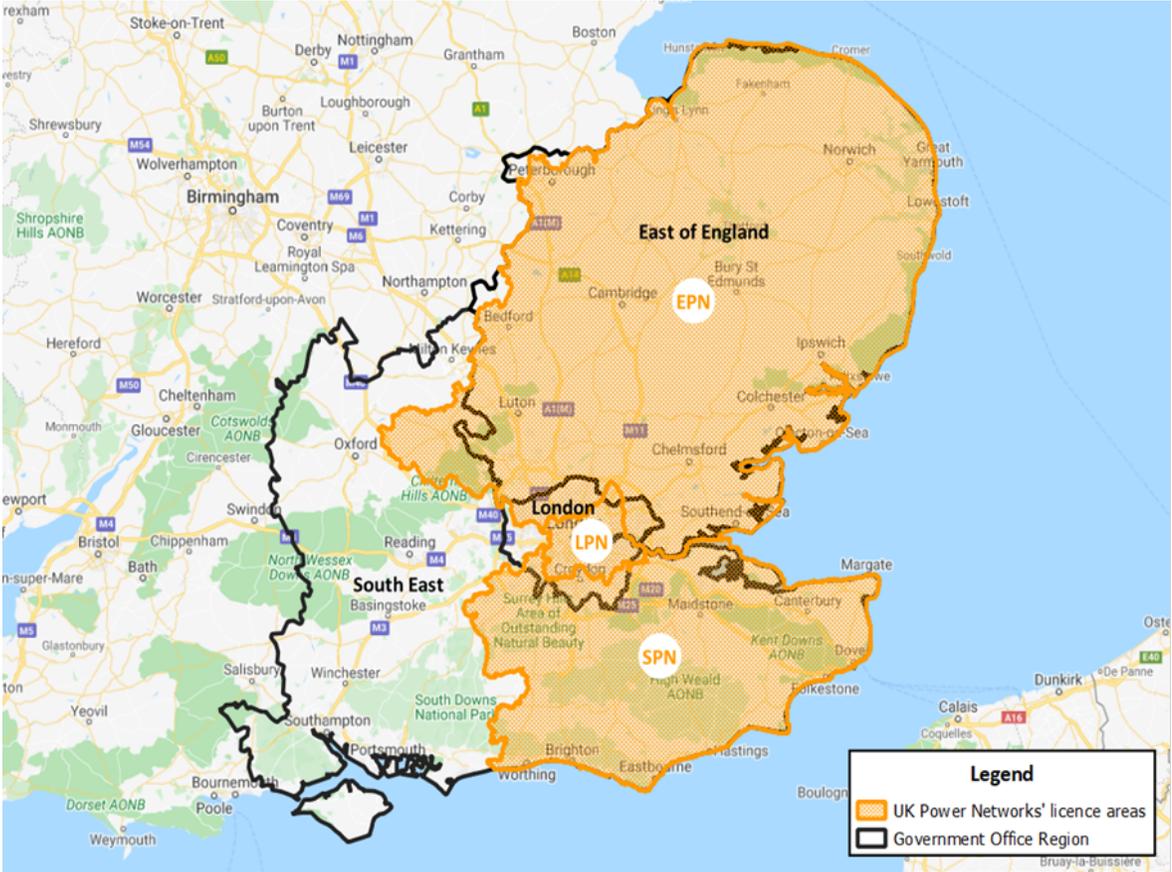

October 2022

Lynne McDonald- Local Area Energy Planning Manager
Lynne.mcdonald@ukpowernetworks.co.uk

UK Power Networks

Serving London, the East and South East of England

Local Ambitions

UK Power Networks serves 127 Local Authorities

80%

Climate Emergency
declared

87%

Accelerated target to reach
net zero or be carbon neutral
before 2050

What is LAEP?

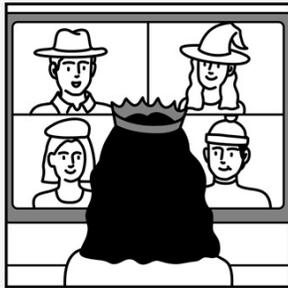

Local Area Energy Planning (LAEP) is a data driven and whole energy system, evidence-based approach that sets out to identify the most effective route for the local area to contribute towards meeting the national net zero target, as well as meeting its local net zero target.

[REF: Guidance on creating a LocalArea Energy Plan - Energy Systems Catapult](#)

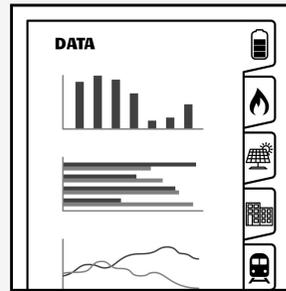

1. Awareness

2. Preparation

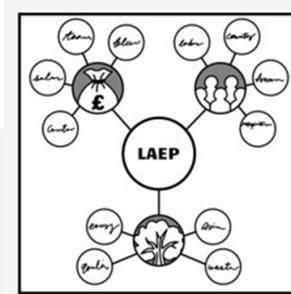

3. Establish Baseline

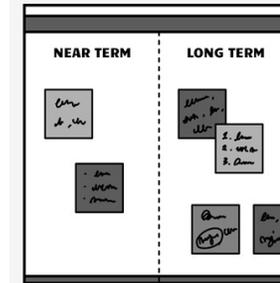

4. Modelling Options

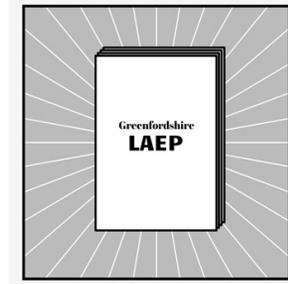

5. Reviewing Pathways and Refinement

6. Decisions on Actions and Priorities

7. Local Area Energy Plan (LAEP)

8. Implementation and Monitoring

Data

Co-creating the Local Authority Data Template

Collaborating with Regen, Essex County Council and Greater London Authority to understand the datasets needed to support the most pressing local net zero planning challenges.

#1: I want to know the most viable places to connect new energy generation assets that considers connection cost and resource availability

#4: I want to deploy renewable generation on council land and procure renewable energy for the council

#13: I want to make targeted transport infrastructure investment decisions to improve air quality and public health

Spatial Analysis and Mapping

Collaborative Local Energy Optimisation (CLEO)

- Engaging with our customers and collaborating with design thinking specialists That Product Studio (TPS), Energy Systems Catapult & Buro Happold
- Developing a self-service digital tool that enables Local Authorities to make the best choices for their communities in developing their Local Area Energy Plan

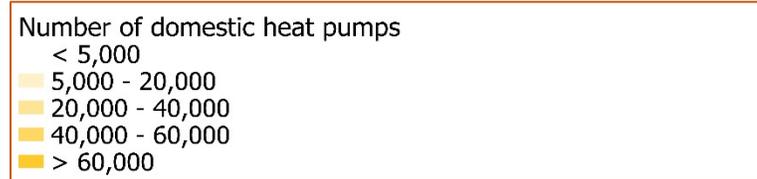

DFES – Consumer Transformation scenario

Electric cars & vans in 2030
4.2m (10.5m by 2050)

Homes with solar panels in 2030
374,000

Battery capacity in 2030
4.5 GW

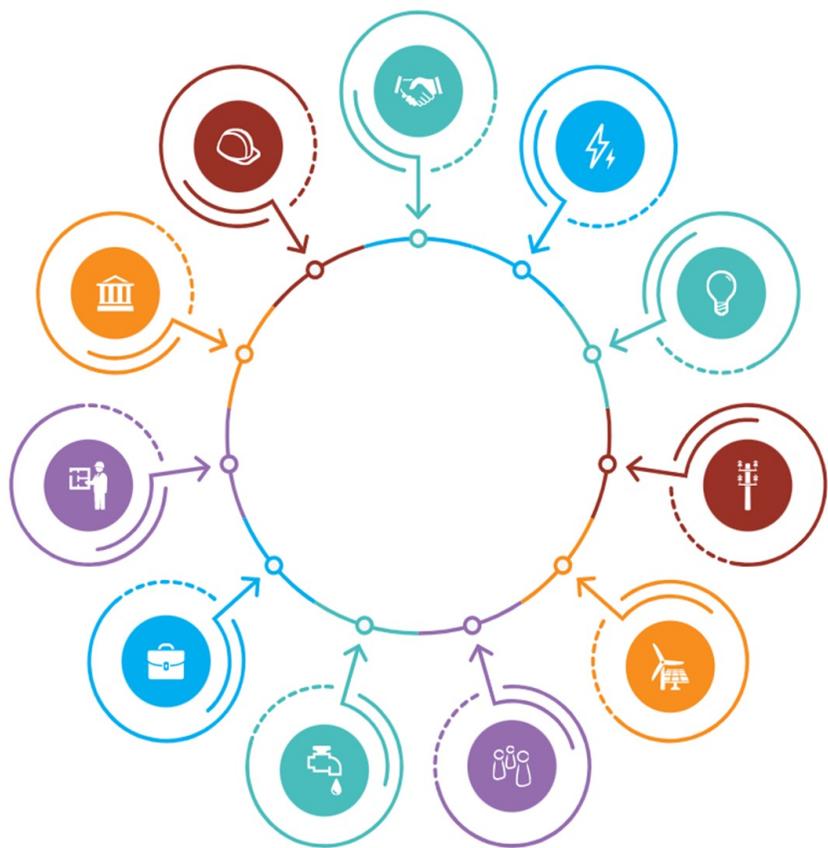

Heat Pumps in 2030
748,000

Forecasts resolved for roughly
11,000
 individual areas

57
 individual drivers and technologies modelled out to 2050

Geography				
	Minimum population	Maximum population	Minimum number of households	Maximum number of households
LSOA	1,000	3,000	400	1,200
MSOA	5,000	15,000	2,000	6,000

Support Local Authorities with their Net Zero plans

Collaborate and combine our expertise in energy and Local Authorities local knowledge

Facilitate best value solutions for Local Authorities and communities:
Right capacity, At the right place, At the right time, At lowest cost
